Details

This book offers an up-to-date and comprehensive picture of the Vietnamese economy, which is the fast-growing economy in Southeast Asia. The country has invested heavily in education, health, and development infrastructure across the country. Progress in recent decades has been strong and Vietnam has attracted significant relocation and outsourcing of production from The Organization for Economic Cooperation and Development (OECD) countries. In the recent years, much of the foreign direct investment from China has been channeled to Vietnam. The state's development policy has created optimal conditions for further expansion of production, supply chain, education and finances. Investment in education, health, infrastructure, administration and regulations is facilitating investment inflows, technology transfer and spillover to the growing national companies. The educated young population and disciplined labor force have provided a strong basis for the growth of the economy. The high level of productivity, improved quality of products, low and competitive cost of production, and over 100 million people provide a strong base for a continuous economic growth.

This edited volume, brings together selected papers presented at The 5th International Conference on Business (ICB 2023), providing good insights into the features of the economy and its development potential. They provide an up-to-date overview and an empirical research-based picture of the recent trends in Vietnam's economic development. The book would be a useful read for educators, undergraduate and graduate students, domestic and foreign investors, government agencies, provincial and industrial sector decision-makers, trade partners, libraries, individual researchers, and professional and practitioners. It helps to fill the gap in knowledge and inform development planners and investors about different sectors of the Vietnamese economy and its development potential.
