Details

This collection of papers by some of the world's leading development economists is remarkable for its wide scope. It covers such varied topics as stagflation in the third world; the extension of free trade to include international investment; the early 1980s in Latin America; the economic growth of Africa and communal land tenure systems and their role in rural development. As well as representing important contributions in themselves, the papers acquire unity from a similarity in approach - always giving priority to reality if it comes into conflict with theoretical bias.
