Details

This textbook examines corruption through a macroeconomic lens, exploring the relationship between corruption, fiscal policy, and political economy. The book merges macroeconomic growth models with elements of political economic theory to address important applied topics such as income inequality within and across countries, growth slowdowns, and fiscal crises. Most of the basic ideas are illustrated using a two-period model of government investment that captures the future cost of policies that favor the present (Chapters 2-3). The more subtle and advanced issues are illustrated and, in some cases, quantified, using the overlapping-generations model of economic growth (Chapters 4-6). The models used to illustrate the mechanisms of economic growth are extended to incorporate politics and the behavior of public officials (Chapters 3, 5-7). The text concludes with a thorough discussion of policy reforms designed to address the issues discussed in earlier chapters. Intended for students familiar with intermediate-level economics, the book contains a technical appendix, including detailed explanations of each model, end-of-chapter questions and problems, and a complete solutions manual, making it ideal for self-study. Offering a unified explanation for the causes and consequences of government failure, fiscal crisis, and the needed policy reforms, this text is appropriate for advanced undergraduate and beginning graduate courses in macroeconomics, political economy, and public policy.
