

Inequalities: Theory, Experiments and Applications

BESCHREIBUNG

Wellknown economists analyze and discuss the latest developments in inequality economics, predominantly income inequality. The papers are theoretical, empirical and experimental and have not been published beforehand. They give answers to the problem of measurement of inequality and related topics such as equivalence scales or the influence especially of the public authorities in the way of different kinds of taxation. This volume is of special interest for all those working in the field of distributional economics.
